

LPO 8800: STATISTICAL METHODS IN EDUCATION RESEARCH

Sean P. Corcoran

Fall 2026

Office: Payne 337

Office Hours: Wednesdays 9-11 am (or by appt.)

<https://calendly.com/sean-p-corcoran>

E-mail: sean.corcoran@vanderbilt.edu

Classroom: 6 Magnolia Circle 232

Class Hours: Tues 8-10:50 am

Class website: [Github](#)

Course Description

This course is an introduction to the theory, methods, and practice of statistics. It is intended as a foundational prerequisite for graduate students who intend to complete the core quantitative methods sequence in the Education Policy and Leadership program (Regression I/II, Causal Inference). Topics will include probability theory, descriptive statistics, population distributions, hypothesis testing and confidence interval estimation, correlation, and regression. While concepts will be introduced with some mathematical rigor, the primary emphasis is the practical application and conceptual understanding of statistics. The course will be taught using the Stata statistical software package and large-sample datasets commonly used in education policy and social science research.

Prerequisites

A prior undergraduate or graduate course in statistics is recommended, though not required. Note that the class begins at a very introductory level but advances quickly. If you have concerns about your prior preparation for this class, please see me.

Books

The following textbook is valuable as a reference but not required:

Statistical Methods for the Social Sciences, 5th edition by Alan Agresti, Pearson, 2022.

If you have no experience with Stata, you may benefit from the following simple introductory text (not required). I will also provide other resources for learning Stata.

A Gentle Introduction to Stata, Revised 6th edition by Alan C. Acock, Stata Press, 2023.

Other readings listed in the course schedule below will be made available via Github.

Course Structure

The class will meet once per week, in person. Class meetings will be a mix of lecture and in-class exercises. Some supplemental material will be provided online (e.g., short recorded lectures).

Please note this is a graduate course designed for students at the doctoral and master's level. I expect that students enrolled in the course are motivated by a desire to learn the course material. Please come to class having reviewed the lecture notes and recommended readings. Attendance and participation in class are extremely important given our once-per-week schedule.

Stata

Stata is the statistical software used in this course. I recommend buying a short-term or perpetual license. Stata has a subscription model called StataNow where users pay an annual fee to license a continually-updated version of Stata (the current version is 19). The student price is \$94 per year for Stata BE (handles mid-size datasets) and \$179 for Stata SE (handles large datasets). There are discounted rates for group purchases (2+). A perpetual license is available that does not expire, but also does not entitle you to upgrades. See the Stata website for details and make sure you get the best price for your intended usage: <https://www.stata.com/order/new/edu/profplus/student-pricing/>. I am currently using Stata 19, but other recent vintages are fine for this class (e.g., 15-18). Be aware that small differences exist between versions, and that files created in recent versions of Stata may not open in older versions. If you don't wish to purchase Stata, it should be available to you in campus computer labs. Vanderbilt also makes Stata available to you virtually. See <https://researchguides.library.vanderbilt.edu/stataResources/softwareAccess> for details.

There are many excellent resources for learning Stata. See this site for a useful starting point: <https://www.stata.com/links/>. There are some handy Stata "cheat sheets" posted here: <https://www.stata.com/flyers/statacheatsheets.pdf>. I will also upload numerous other Stata references and links to Github.

Course Requirements

Your grade for the course will be based on **11** problem sets (45%), a statistical project (15%), a midterm (20%), and final exam (20%). The problem sets will vary in length and points possible, but each will be weighted equally when calculating your final grade, using the percent correct on each. Since 12 problem sets are assigned, you will be permitted to drop your lowest score. Unfortunately, due to the advent of AI tools, the exams must be administered in person.

The (tentative) schedule of problem set assignments is shown in the course schedule below. These are subject to change based on the pace of the course. Please submit your problem set solutions to me via email at sean.corcoran@vanderbilt.edu. Include your last name and problem set number in the filename (e.g., *Corcoran_PS1.pdf*). Late assignments will not be accepted, particularly after problem set solutions have been provided or discussed in class.

Unless otherwise indicated, the file you submit to me should be a log of your Stata session, saved as a text file (with the .txt extension) or—better yet—converted to a PDF. Begin by copying the

problem set instructions into the Stata do-file editor. Comment out the questions. Insert after each question the commands you used to respond to that question. The resulting log file will include the instructions (in the form of comments), your commands, and the output. Edit this file as appropriate, for example by adding interpretations of your output and any other commentary that might be asked for. Graphical output can be submitted separately, preferably as a PDF file. (Combine all your PDFs if possible). Please clean up your submitted results so they are readable and look professional. You are encouraged to work together on the problem sets, but all work submitted must be that of the individual student. Duplicate assignments will not be accepted.

Based on feedback in previous semesters, I will answer questions about the problem sets in class but not devote much class time to the solutions. Detailed solutions will be posted on Github.

Other Important Information

1. **Github:** All materials pertaining to this course, including lecture notes, problem sets, and datasets, will be available on Github (<https://github.com/spcorcor18/LPO-8800>). Check in frequently for new material and announcements. Lectures will be posted in advance of class, but occasional delays and revisions/edits are to be expected. The course is stored in what Github calls a “repository”. You can “clone” (sync) this repository to your local drive using Github Desktop (<https://desktop.github.com/>). I recommend this easy approach to staying up to date with all of the course materials.
2. **Classroom etiquette:** To help promote a productive learning environment, please devote your time and attention to the class itself. Please do not use social media, text messaging, email, or other digital distractions while in class. Please silence your cell phone as well.
3. **Artificial intelligence:** The use of AI in teaching and research is rapidly evolving. These tools can be highly beneficial when learning new skills or researching new ideas. While you are permitted to use AI as a learning tool, you should **not** use generative AI tools to complete assignments in this course. The goal is for you to learn the concepts and coding skills taught in this course. It is important to note that passing off generative AI work as one’s own is a violation of Vanderbilt’s [Honor Code](#). Students are encouraged to study together and may collaborate on individual assignments when directed. However, each student should individually write and submit their own work.
4. **Honor code:** All work submitted in this course is governed by provisions of the Vanderbilt University Honor Code, found in the student handbook: http://www.vanderbilt.edu/student_handbook/the-honor-system/. Any attempt to pass off someone else’s work as your own is a violation of the Honor Code, and there are many ways this can happen beyond blatant cheating. If you have any doubts about how the Honor Code applies to your work in this class, please ask me for clarification. Uncertainty about application of the Honor Code does not excuse a violation.
5. **Classroom recording policy:** The use of technologies for audio and video recording of lectures and other classroom activities is allowed only with the express permission of the instructor. In cases where recordings are allowed, such content is restricted to personal use only unless permission is expressly granted in writing by the instructor and by other

classroom participants, including other students. Personal use is defined as use by an individual student for the purpose of studying or completing course assignments.

6. **Health and safety:** Our mutual commitment to health and safety is vital. Toward that end, all students are expected to adhere to Vanderbilt health and safety protocols. Guidance may be updated throughout the semester.
7. **Names and pronouns:** If you would like to use a different name or pronouns than those provided through YES, please let me know at any time prior to or during the semester.
8. **Accommodations:** Vanderbilt is committed to equal opportunity for students with disabilities. If you need course accommodations due to a disability, please contact VU Student Access Services to initiate the process: <https://www.vanderbilt.edu/student-access/>. After SAS has notified me of relevant accommodations, we will discuss how these accommodations may best be approached in this class, and I will facilitate the accommodations.
9. **Mandatory reporter obligation:** All university faculty must report allegations of sexual misconduct and intimate partner violence to the Title IX coordinator. I am willing to discuss such incidents with you, but I can only do so in the context of us both understanding my reporting obligations. The [Project Safe Center](#) serves as Vanderbilt's central resource for those impacted by sexual misconduct and intimate partner violence. They can assist you with navigating all facets of the University's resource and support network.
10. **Mental health and wellness:** If you are experiencing undue stress during the semester that may be interfering with your ability to perform academically, Vanderbilt's [Office of Student Care Coordination \(OSCC\)](#) is the central and first point of contact to help you navigate and connect to appropriate resources. If you or someone you know needs to speak with a professional counselor immediately, the University Counseling Center offers [Urgent Care Counseling](#).

Statistical Project Instructions

Overview

The statistical project is an opportunity for you to apply your knowledge of statistics to real-world data, and answer a specific research question. You will analyze your data using Stata, interpret your results, and communicate your findings in writing.

Requirements

For the statistical project, you may choose one of the following options: (1) provide a written report on a topic to be determined by me, or (2) provide a written analysis of a research question of your choice, using appropriate data. I will provide data for the former, and guidance on the latter. PhD students are recommended (though not required) to choose option 2.

Your written analysis should range between 12–15 pages, including tables and graphs. You may wish to include some graphs and tables in the main body of the paper, and relegate others to an appendix (appendices do not count toward the page limit).

Deadlines

You should decide which option you are pursuing (and if 2, a topic) by **October 6**. The project itself will be due on or before **December 8**. Please submit your completed project as a PDF document via email, and use your last name and the words “Statistical Project” as the filename.

Guidelines

Think of your statistical project as communicating a story through data analysis. Like any good story, it should have a beginning, middle, and end, and a “storyline” that is clear, logical, and compelling. Be selective about tables, graphs, and statistics you choose to include. Overwhelming your reader with output and statistical results is a surefire way to lose and bore them. It also makes you look like an amateur. Be sure to reference all figures and tables in the text itself.

You may use any technique learned in class in your analysis, unless otherwise specified (relevant in option 1). One of the objectives of this project is a demonstration that you know which techniques to apply in specific situations. In many cases there is more than one technique that can be used. Choose the one that most clearly communicates the result you are trying to convey to the reader. Show some range in your use of methods, and avoid overt repetition.

If you choose option 1, you must fully address all of the questions I assign. These will be available later in the semester. If you choose option 2, you may craft your own research question as you see fit—but the quantity and rigor of the analysis should match or exceed that required under option 1.

Sample projects will be posted on Github as an example of past work. Additional details on the project will be provided later in the semester.

Class schedule

The schedule is tentative and subject to change.

Lecture 1 (Sep 1): Introduction to concepts of probability and statistics

Agresti chapters 1-2

Shafer, Leah. (2016). "When Proficient Isn't Good," Harvard Graduate School of Education. Available at: <https://www.gse.harvard.edu/news/uk/15/12/when-proficient-isnt-good>

Problem set 1 assigned Sep 1, due Sep 8

Lecture 2 (Sep 8): Describing univariate distributions

Agresti chapter 3

Loeb, S., Dynarski, S., McFarland, D., Morris, P., Reardon, S., & Reber, S. (2017). *Descriptive analysis in education: A guide for researchers*. (NCEE 2017-4023). Washington, DC: U.S. Department of Education, Institute of Education Sciences, National Center for Education Evaluation and Regional Assistance. Available at: <https://ies.ed.gov/ncee/pubs/20174023/pdf/20174023.pdf>

Problem set 2 assigned Sep 8, due Sep 15

Lecture 3 (Sep 15): Probability and probability distributions

Agresti chapter 4

Problem set 3 assigned Sep 15, due Sep 22.

Lecture 4 (Sep 22): Sampling distributions

Agresti chapter 4

Kane, T. J. and D. O. Staiger (2002). "The Promise and Pitfalls of Using Imprecise School Accountability Measures." *Journal of Economic Perspectives* 16(4): 91–114. Available at: <http://www.jstor.org/discover/10.2307/3216916>

Problem set 4 assigned Sep 22, due Sep 29.

Lecture 5 (Sep 29): Statistical inference: estimation

Agresti chapter 5

Romer, D. (2020). "In Praise of Confidence Intervals." *AEA Papers and Proceedings* 110: 55-60. Available at: <https://pubs.aeaweb.org/doi/pdfplus/10.1257/pandp.20201059>

Problem set 5 assigned Sep 29, due Oct 6.

Lecture 6 (Oct 6): Statistical inference: significance tests

Agresti chapter 6

Greenland, S., S. J. Senn, K. J. Rothman, J. B. Carlin, C. Poole, S. N. Goodman and D. G. Altman (2016). "Statistical tests, P values, confidence intervals, and power: a guide to misinterpretations." *European Journal of Epidemiology* 31(4): 337—350. Available at: <https://link.springer.com/article/10.1007/s10654-016-0149-3>

Imbens, G. W. (2021). "Statistical Significance, p-Values, and the Reporting of Uncertainty." *Journal of Economic Perspectives* 35(3): 157-174. Available at: <https://www.aeaweb.org/articles?id=10.1257/jep.35.3.157>

Wasserstein, R. L., & Lazar, N. A. (2016). "The ASA Statement on p-Values: Context, Process, and Purpose." *The American Statistician*, 70(2), 129133. Available at: <https://doi.org/10.1080/00031305.2016.1154108>

Problem set 6 assigned Oct 6, due Oct 20 (after midterm).

Please notify Prof Corcoran about your intended statistical project topic.

MIDTERM EXAM (Oct 13)—in class

Lecture 6 (Oct 20): Statistical inference: significance tests (continued)

Problem set 7 assigned Oct 20, due Oct 27

Lecture 7 (Oct 27): Statistical power and effect size

Agresti chapter 6

Romer (2020) - see Lecture 5

Review for final exam

Statistical project due

FINAL EXAM (Dec 15)

Schedule at a glance

Sep 1	Lecture 1: Introduction to concepts of probability and statistics	PS1 assigned
Sep 8	Lecture 2: Describing univariate distributions	PS2 assigned
Sep 15	Lecture 3: Probability and probability distributions	PS3 assigned
Sep 22	Lecture 4: Sampling distributions	PS4 assigned
Sep 29	Lecture 5: Statistical inference: estimation	PS5 assigned
Oct 6	Lecture 6: Statistical inference: significance tests (and review for midterm)	PS6 assigned
Oct 13	Midterm	
Oct 20	Lecture 6: Statistical inference: significance tests (cont.)	PS7 assigned
Oct 27	Lecture 7: Statistical power and effect size	PS8 assigned
Nov 3	Lecture 8: Hypothesis testing: two groups	PS9 assigned
Nov 10	Lecture 9: Covariance and correlation	PS10 assigned
Nov 17	Lecture 10: Linear regression	PS11 assigned
Nov 24	NO CLASS - Thanksgiving	
Dec 1	Lecture 11: Multiple regression: introduction	PS12 assigned
Dec 8	Lecture 12: Principal components analysis (and review for final)	Project due
Dec 15	Final exam	

Notes:

- Due dates and the number of problem sets are subject to change.
- VU Fall Break is Thursday and Friday, October 22-23.
- I will be traveling on **Tuesday October 6** so we will look for an alternative meeting time.
